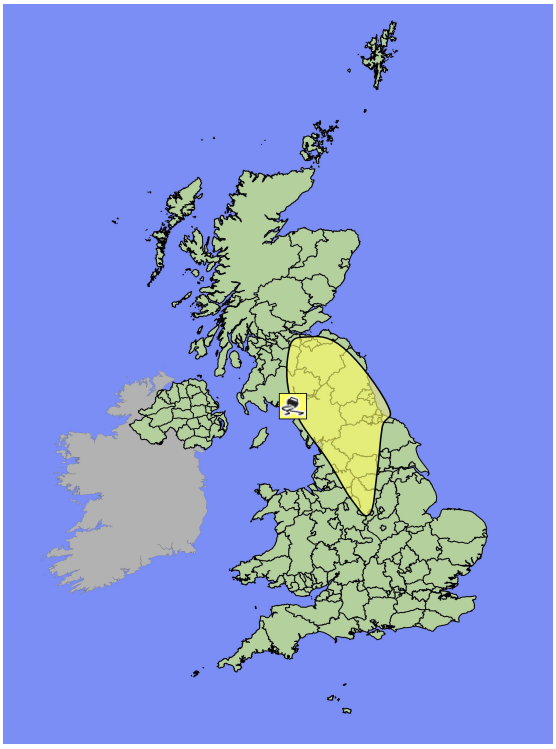
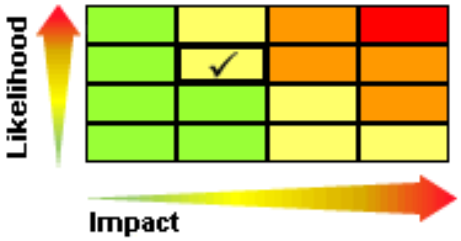
National Severe Weather Warning Service





Chief Forecasters Assessment
A weak front moving up from the south will give light precipitation. As this happens temperatures will rise, though this will be a slow process and so in some places ice is expected on roads and pavements for a further few hours.

This is an update to a previously issued warning - the geographical area covered has been expanded northwards and the warning end time has been extended to 1300 today.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **04:30 on Fri, 14th Dec 2012** until **13:00 on Fri, 14th Dec 2012**

Road surface temperatures may be below freezing as some rain, sleet and snow move north across the area. The public are advised to be aware of the risk of ice, especially on untreated surfaces. Road surfaces will generally rise above freezing from the south but may be slow to do so over the higher routes.
